# CELOTEX SHINGLES SEE U. S. PAT. OFF. SIDING • ROLL ROOFING

The “Triple Sealed” insignia is more than a mere trade-mark identifying a product . . . it is the story of a process used in manufacturing Celotex Asphalt Shingles, Siding and Roll Roofing. The three seals that provide added years of service and greater protection are your assurance of satisfaction. Look for the “Triple Sealed” trade-mark . . . it’s a sign of highest quality . . . always.

THE CELOTEX CORPORATION • CHICAGO, ILLINOIS

# *From Rags to Riches-* The STORY of CELOTEX ROOFING

Strange as it seems, asphalt roofing is made partly from rags. But even in rags there is a difference. Those used in Celotex Asphalt Roofing are selected and graded by hand, dusted, cleaned and carefully processed. This rag stock is made into clean felt, uniformly thick and dense, on up-to-date cylinder machines. Asphalts used are from selected crude oils processed and chemically checked. Granules mined from Mother Earth, or scientifically manufactured, meet rigid specifications. Finally, samples of finished roofing are carefully tested against Celotex standards of perfection. Thus, the true story of "From Rags to Riches" is enacted every day in the making of Celotex Asphalt Roofing, resulting in rich colors, and superior quality.

# Years of Extra Life - The STORY of TRIPLE SEALING

- 1 **Inner Sealed:** By special process, asphalt is forced into felt base from *one side only!* Air and moisture is *driven out* ahead of the asphalt.
- 2 **Outer Sealed:** The *saturated* base is next dipped in an asphalt bath—*encased in a second seal.*
- 3 **Face Sealed:** Finally, a tempered mineral-filled asphalt coating is applied—*thus forming a tough, durable third seal.*

It is now a known fact that many roof and siding materials *aid in destroying themselves*—that tiny air and moisture bubbles trapped inside during manufacture, expand and contract with each temperature change, thus causing a weakening of structure that eventually leads to trouble! The Celotex “Triple Sealed” Process drives out pocketed air and moisture—gives 3-way protection against costly self-destruction. Thus Celotex Triple Sealed roofing and siding is sealed from the inside-out against the elements and against self-destruction. Follow the manufacturing progress on the next page.

## SEAL NO. 1

As the asphalt is forced into the felt from the front side only, it gradually "bleeds" through and out the back as shown here.

Front

Back

## SEAL NO. 2

After the inside of the felt is thoroughly saturated and filled Seal No. 2 is applied by submerging the entire piece in asphalt.

Seal No. 1  
under Seal  
No. 2

## SEAL NO. 3

The third step puts still another protective coat of special mineral-filled asphalt on top of Seal No. 2 —increasing toughness and durability.

Seal No. 2  
under Seal  
No. 3

## GRANULE FINISH

Now colored fireproof granules are firmly embedded in a coating of asphalt on top of the "Triple Sealed" base.

Seal No. 3  
under Granule  
Finish

# Tested for Weather

## EVERYWHERE

No matter how beautiful a roof may be, if it cannot withstand the climate *where it is used*, it fails as a roof. Celotex Asphalt Shingles, Siding and Roll Roofing are rigidly tested for weather. Severe cold, excessive heat, torrential rains, violent winds, spanking, scrubbing with wire brushes, beating—all are a part of the tests applied to Celotex Triple Sealed Roofing Products. Nature is a tough taskmaster and Celotex uses her methods to make your Celotex Triple Sealed Asphalt Roof proof against weather—everywhere.

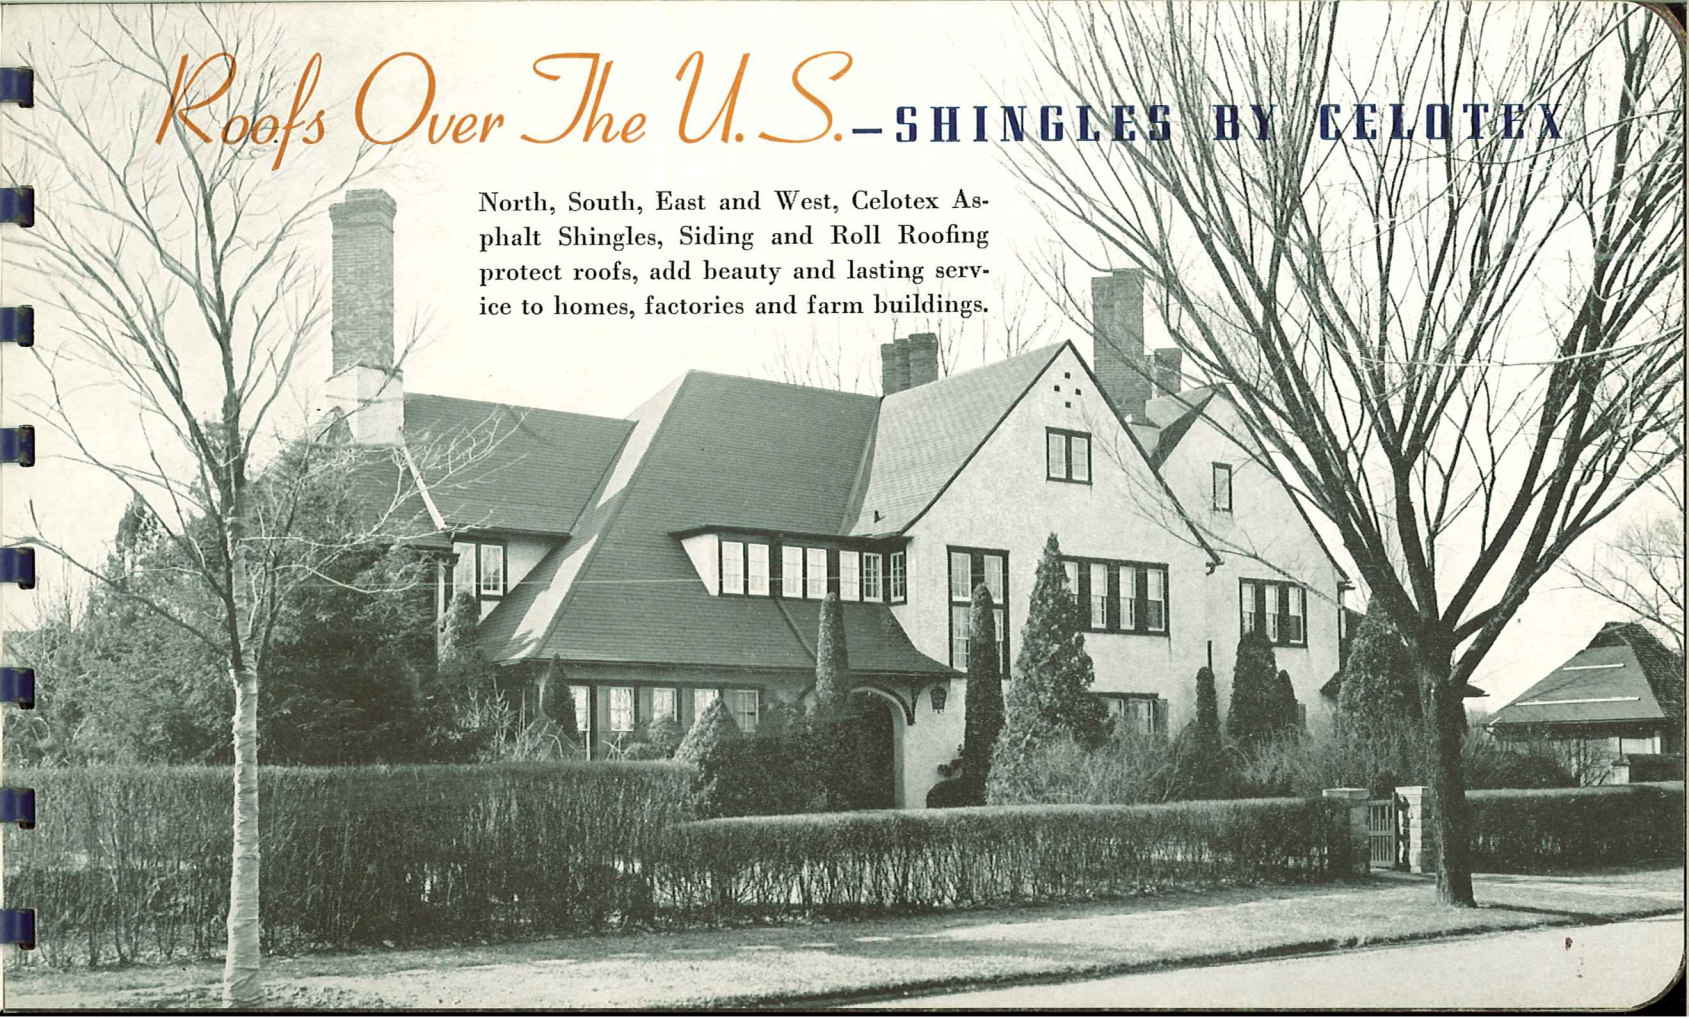

## FOR YOUR PROTECTION

# *Roofs Over The U.S.*—SHINGLES BY CELOTEX

North, South, East and West, Celotex Asphalt Shingles, Siding and Roll Roofing protect roofs, add beauty and lasting service to homes, factories and farm buildings.
